Approved by Alfred C. Holland, State Purchasing Agent

ABSTRACT

The furlough program has been an integral part of the Massachusetts Correctional Institutions since the program began in November, 1972. A total of 41,563 furloughs were granted between the inception of the program and December 31, 1977. During that period, 439 of those furloughs resulted in escapes (a resident failing to return to his correctional facility within two hours of his designated time), thus yielding an overall escape rate of 1.06%. The present report contains a statistical description of the furlough program for the year 1977 as well as a trend analysis of the program since its inception in 1972.

An analysis of available statistics revealed that although the number of furloughs granted over the years has fluctuated, the escape rate has decreased from 1.9% in 1972 to 0.5% in 1977, remaining relatively stable during the last two years of that time period. It was also noted during that period that the number of furloughs granted from lower security pre-release centers increased, as less furloughs were granted from higher security correctional institutions. Finally, this report presents frequencies and escape rates of background characteristics for each furlough granted during 1977. Information included in these tables consists of present offense variables, personal background characteristics, criminal history statistics and furlough variables.

- INTRODUCTION

This report is a statistical description of the Massachusetts Department of Correction Furlough Program for the year 1977. Included is some trend analyses covering the program since its inception in 1972.

The report is divided into two sections. Section I provides a brief overview of the Massachusetts Furlough Program. Comparisons of furlough characteristics over the past five years, as well as monthly escape rates and proportions are discussed. Section II contains escape rates on background variables of an individual for each furlough granted during 1977. The background variables include personal background characteristics, present offense variables, criminal history variables and furlough variables. The figures in the tables represent numbers of furloughs, not numbers of individuals; therefore, an individual may be counted more than once if he/she has had more than one furlough during 1977.

The data for the construction of the tables in this report were derived from the computerized data base developed by the Correction and Parole Management Information System (CAPMIS) and were produced on the Massachusetts State College Computer Network (MSCCN).

SECTION I: OVERVIEW

OVERVIEW

The furlough program for residents of Massachusetts correctional facilities has been extensively implemented since the program commenced operation in November of 1972. Between that time and December 31, 1977, a total of 41,563 furloughs have been granted. In 439 cases, inmates have failed to return to their respective correctional facility within two hours of their prescribed time of return. Thus since the inception of the program there is an overall escape rate of 1.06%.¹

Table I is a summary of furlough statistics for the years 1973 to 1977. For each of these years, information regarding the number of furloughs, the number of individuals furloughed, the number of escapes and corresponding escape rates is presented. The escape rates by furlough have decreased from 1973 to 1977 and range from 1.9% to 0.5%. Similarly, the escape rates by individuals have also decreased. Even though the number of furloughs has increased by 2.7% over the past two years, the escape rate has remained at 0.5. Although the number of individuals furloughed has been decreasing, the number of furloughs granted has fluctuated over the years.²

TABLE I

SUMMARY FURLOUGH STATISTICS FOR THE YEARS 1973 TO 1977

<u>YEAR</u>	<u>NUMBER OF FURLOUGHS</u>	<u>INDIVIDUALS FURLOUGHED³</u>	<u>NUMBER OF ESCAPES</u>	<u>ESCAPE RATE BY INDIVIDUAL³</u>	<u>ESCAPE RATE BY FURLOUGH</u>
1973	7195	1868	134	7.2	1.9
1974	8322	1668	127	7.6	1.5
1975	8680	1482	88	5.9	1.0
1976	7985	1305	40	3.1	0.5
1977	8199	1355	42	3.1	0.5

Table II gives furlough statistics by institution furloughed from for the years 1973 to 1977. The number of furloughs, the number of escapes and the corresponding escape rates for each correctional institution is given. Although minor fluctuations have occurred at some institutions, the overall escape rates have been decreasing. Furthermore, the range of escape rates among institutions has been narrowing each year. In particular, the range of escape rates are 0.0% to 5.3% in 1973, 0.0% to 4.2% in 1974, 0.0% to 3.3% in 1975, 0.0% to 3.4% in 1976 and 0.0% to 2.7% in 1977. Also apparent is the decrease in the number of furloughs granted from higher security institutions and conversely, more furloughs granted to the lower security pre-release centers.

TABLE II

COMPARATIVE FURLough STATISTICS BY INSTITUTION FOR THE YEARS 1973-1971

The escape rates by month for 1977 (see Table III) range from 0.3% for May, June and November to 0.8% during January and February. Apparently the escape rates are lowest during late spring and the early summer. It is interesting to note that although the number of furloughs increased, the escape rates remained relatively stable during these months.

TABLE III
ESCAPE RATES BY MONTH

<u>MONTH</u>	<u>NUMBER OF FURLoughS</u>	<u>NUMBER OF ESCAPES</u>	<u>ESCAPE RATE</u>

October	734	4	0.5
November	745	2	0.3
December	1050	5	0.5
TOTAL	8199	42	0.5

Finally, the number of inmates furloughed per month in proportion to the average populations for each institution is presented in Table IV. As can be seen from this table, the institutions with the higher proportions are those of lowest security. Statewide, out of an average population of 2,691, an average of 417 inmates received a furlough during a course of a month. This results in an average proportion of 15.5% of the inmate population being furloughed during the course of one month. This is 0.8 percentage points higher than that of last year.

* These figures represent averages for months in which the facilities were in operation

** The greater number of individuals furloughed at these institutions reflects a substantial turnover at these facilities.

SECTION III: ESCAPE RATES OF BACKGROUND CHARACTERISTICS
OF THE FURLOUGH POPULATION

The tables which follow contain frequencies and escape rates of characteristics of an individual for each furlough granted during 1977. Information concerning an individuals present offense variables, personal background characteristics, criminal history and furlough variables are presented. It is important to note that the figures in these tables refer to the number of furloughs, not the number of individuals furloughed; therefore, an individual may be counted more than once if she/he has had more than one furlough during 1977.

FOOTNOTES

1. The Department of Correction furlough statistics define an "escape from furlough" in accordance with Department Order 46701, entitled, "Furloughs-rules and regulations". According to Section 10.4 (c): "Failure of the resident to return to the correctional facility after the two hour period set forth in Section 10.4 (b) shall be considered an escape regardless of prior notification to the facility by the resident that he would be late. The superintendent or his designee shall notify, forthwith, appropriate law enforcement officials of the escape".
2. Daniel's Test and Mann-Kendall Test were used to determine trend. For the number of escapes, Daniel's Test results are N=5; d=2; p < .05 and the Mann-Kendall Test results are N=5, S=-8; p < .05. The results for the number of individuals furloughed are exactly the same as for the number of escapes. For the number of furloughs, Daniel's Test results are N=5; D=16; p > .05 and the Mann-Kendall Test results are N=5, S=2; p > .05.
3. These figures may differ from prior departmental reports due to multiple counting of individuals furloughed from different institutions.

1978 YEARLY STATISTICAL REPORT
OF THE FURLough PROGRAM

Prepared by:

Charles Metzler
Program Development
Specialist

Massachusetts Department of Correction

Larry R. Meachum
Commissioner

July, 1979

PUBLICATION #11467

Approved by Alfred C. Holland, State Purchasing Agent

ABSTRACT

The furlough program has been an integral part of the Massachusetts Correctional Institutions since the program began in November, 1972. A total of 50,625 furloughs were granted between the inception of the program and December 31, 1978. During that period, 477 of those furloughs resulted in escapes (a resident failing to return to his correctional facility within two hours of his designated time), thus yielding an overall escape rate of 0.9%. The present report contains a statistical description of the furlough program for the year 1978 as well as a trend analysis of the program since its inception in 1972.

An analysis of available statistics revealed that although the number of furloughs granted over the years has fluctuated, the escape rate has decreased from 1.9% in 1972 to 0.4 in 1978, remaining relatively stable during the last three years of that time period. It was also noted during that period that the number of furloughs granted from lower security pre-release centers increased, as fewer furloughs were granted from higher security correctional institutions. Finally, this report presents frequencies and escape rates of background characteristics for each furlough granted during 1978. Information included in these tables includes the nature of present offense, personal background characteristics, criminal history and furlough variables.

INTRODUCTION

This report is a statistical description of the Massachusetts Department of Correction Furlough Program for the year 1978. Included is some trend analyses covering the program since its inception in 1972.

The report is divided into two sections. Section I provides a brief overview of the Massachusetts Furlough Program. Comparisons of furlough characteristics over the past six years are discussed. Section II contains escape rates on background variables of an individual for each furlough granted during 1978. The background variables include personal background characteristics, present offense variables, criminal history variables and furlough variables. The figures in the tables represent number of furloughs, not numbers of individuals; therefore, an individual may be counted more than once if he/she has had more than one furlough during 1978.

The data for the construction of the tables in this report were derived from the computerized data base developed by the Correction and Parole Management Information System (CAPMIS) and were produced on the Massachusetts State College Computer Network (MSCCN).

SECTION I: OVERVIEW

The furlough program for residents of Massachusetts correctional facilities has been extensively implemented since the program commenced operation in November of 1972. Between that time and December 31, 1978, a total of 50,625 furloughs have been granted. In 477 cases, inmates have failed to return to their respective correctional facility within two hours of their prescribed time of return. Thus since the inception of the program there is an overall escape rate of 0.9%.¹

Table I is a summary of furlough statistics for the years 1973 to 1978. For each of these years, information regarding the number of furloughs, the number of individuals furloughed, the number of escapes and corresponding escape rates is presented. The escape rates by furlough have decreased from 1973 to 1978 and range from 1.9% to 0.4%. Similarly, the escape rates by individuals have also decreased. Even though the number of furloughs has increased by 11% over the past two years, the escape rate dropped to 0.4%. Although the number of individuals furloughed has been decreasing, the number of furloughs granted has fluctuated over the years.

TABLE I
SUMMARY FURLOUGH STATISTICS FOR THE YEARS 1973 TO 1978

YEAR	NUMBER OF FURLOUGHS	INDIVIDUALS FURLOUGHED ²	NUMBER OF ESCAPES	ESCAPE RATE BY INDIVIDUAL ²	ESCAPE RATE BY FURLOUGH
1973	7195	1868	134	7.2	1.9
1974	8322	1668	127	7.6	1.5
1975	8680	1482	88	5.9	1.0
1976	7985	1305	40	3.1	0.5
1977	8199	1355	42	3.1	0.5
1978	9062	1248	38	3.0	0.4

Table II gives furlough statistics by institution furloughed from for the years 1973 to 1978. The number of furloughs and the corresponding escape rates for each correctional institution is given. Although minor fluctuations have occurred at some institutions, the overall escape rates have been decreasing. There were no escapes on furlough during 1978 from Walpole, Norfolk, Plymouth, Charlotte, Brooke, Coolidge, Temporary Housing, Norfolk Pre-Release, 699 House, BOSP/METAC, Drug Rehabilitation, 577 House, Medfield and Park Drive. There has been a decrease in the number of furloughs granted from higher security institutions and conversely, more furloughs granted at the lower security pre-release centers. For example, at MCI-Norfolk, there were 1466 furloughs granted in 1974, compared to only 238 furloughs granted in 1978.

TABLE II

COMPARATIVE FURLough STATISTICS BY INSTITUTION FOR THE YEARS 1973-1977

Finally, the number of inmates furloughed per month in proportion to the average populations for each institution is presented in Table III. As can be seen from this table, the institutions with the higher proportions are those of lowest security. Statewide, out of an average population of 2793, an average of 470 inmates received a furlough during a course of a month. This results in an average proportion of 16.8% of the inmate population being furloughed during the course of one month. This is 1.3 percentage points higher than that of last year.

TABLE III

* These figures represent averages for months in which the facilities were in operation

** The greater number of individuals furloughed at these institutions reflects a substantial turnover at these facilities.

SECTION II: ESCAPE RATES OF BACKGROUND CHARACTERISTICS
OF THE FURLOUGH POPULATION

The tables which follow contain frequencies and escape rates of characteristics of an individual for each furlough granted during 1978. Information concerning an individual's present offense variables, personal background characteristics, criminal history and furlough variables are presented. It is important to note that the figures in these tables refer to the number of furloughs, not the number of individuals furloughed; therefore, an individual may be counted more than once if she/he has had more than one furlough during 1978.

In order to determine any significant relationships between the characteristics of the existing variables and their escape ratios, chi-square statistics were computed. Significant relationships were found in the following variables: institution of commitment, offense, known drug use, total number of court appearances, prior state or federal incarcerations, age at incarceration and age at first arrest. These relationships are described below.

Concord commitments have a significantly higher escape rate (0.8%) than commitments to other institutions (0.3%) [$\chi^2=5.3$; df=1; p < .05]. Inmates convicted for rape have a higher escape rate (2.0%) than inmates convicted for other offenses (0.4%) [$\chi^2=17.6$; df=1; p < .001]. It should be noted however, that rapists constituted only 4% of the total number of furloughs granted. Inmates who have used heroin have a higher escape rate (0.7%) than those who have not (0.3%) [$\chi^2=4.4$; df=1; p < .05]. Those who have 16 or more prior court appearances have a higher escape rate (0.8%) than those who had 15 or less prior court appearances (0.3%) [$\chi^2=8.26$; df=1; p < .01]. Individuals with prior state or federal incarcerations have a significantly higher escape rate (0.8%) than those with no prior state or federal incarcerations (0.3%) [$\chi^2=6.46$; df=1; p < .05]. Inmates who were incarcerated at age 25 or younger have a higher escape rate (0.6%) than those aged 26 or older (0.3%) [$\chi^2=4.36$; df=1; p < .05]. Also, those incarcerated at age 31 or older have an even lower escape rate (0.1%) [$\chi^2=7.36$; df=1; p < .01]. Finally individuals aged 16 or younger at the time of their first arrest have a significantly higher escape rate (0.6%) than those who were first arrested at age 17 or older (0.3%) [$\chi^2=6.46$; df=1; p < .05].

FOOTNOTES

1. The Department of Correction furlough statistics define an "escape from furlough" in accordance with Department Order 46701, entitled, "Furloughs-rules and regulations". According to Section 10.4 (c): "Failure of the resident to return to the correctional facility after the two hour period set forth in Section 10.4(b) shall be considered an escape regardless of prior notification to the facility by the resident that he would be late. The superintendent or his designee shall notify, forthwith, appropriate law enforcement officials of the escape".
2. These figures may differ from prior departmental reports due to multiple counting of individuals furloughed from different institutions.

ABSTRACT

The furlough program has been in operation by the Massachusetts Department of Correction since November 6, 1972. A total of 58,665 furloughs were granted between the inception of the program and December 31, 1979. During that period, 515 of those furloughs resulted in escapes (a resident failing to return to his correctional facility within two hours of his/her designated time), thus yielding an overall escape rate of 0.9%. The present report contains a statistical description of the furlough program for the year 1979 as well as a trend analysis of the program since its inception in 1972.

An analysis of available statistics indicates that although the number of furloughs granted over the years has fluctuated, the escape rate has decreased from 1.9% in 1973 to 0.4% in 1978. There was an 11% decrease in the number of furloughs in 1979 as compared to 1978. This report also presents frequencies and escape rates of background characteristics for each furlough granted during 1979 as well as nature of present offense variables, personal background variables, criminal history variables, and furlough variables.

INTRODUCTION

This report is a statistical description of the Massachusetts Department of Correction Furlough Program for the year 1979. Included is some information on trends for the program from its inception in 1972 until the end of 1979.

The report is divided into three sections. The first section gives an overview of pertinent furlough statistics both since the inception of the program and for 1979; the number of furloughs granted; the number of individuals furloughed; escape rates, trends in furlough statistics; and the effect of furlough participation on recidivism rates. Section II provides a brief overview of the Massachusetts Department of Correction Furlough Program. Comparisons of furlough characteristics over the past seven years are discussed. The last section contains escape rates on background characteristics, present offense variables, criminal history variables, and furlough variables. The figures in the tables represent number of furloughs, not numbers of individuals; therefore, an individual may be counted more than once if he/she has had more than one furlough during 1979.

The data for the tables in this report were derived from the computerized data base developed by the Correction and Parole Management Information System (CAPMIS) and were produced on the Massachusetts State College Computer Network (MSCCN).

SECTION I
STATISTICAL FACT SHEET ON THE MASSACHUSETTS FURLOUGH PROGRAM-1979

STATISTICAL FACT SHEET ON THE MASSACHUSETTS
DEPARTMENT OF CORRECTION FURLough PROGRAM-1979

Proportion of the Population Participating in Furlough Program

On January 1, 1980, the Department of Correction had in its custody 2,754 residents. Of that number, 760 had received one or more furloughs (28%). The remaining 72% did not participate in the furlough program. This excludes these individuals awaiting booking in the system.

Overall Statistics

Between the inception of the furlough program in Massachusetts on November 6, 1972, and December 31, 1979, a total of 58,665 furloughs have been granted. The number of individuals furloughed within this time span is 10,951. Thus, the average number of furloughs per resident is approximately 5.

1979 Statistics

From January 1, 1979 to December 31, 1979, a total of 8,040 furloughs were granted. The number of individuals furloughed in 1979 was 1,232. The average number of furloughs per resident was approximately 7.

Escape Rate by Furlough Since Inception of Program

Out of the 58,665 furloughs granted, 515 have resulted in escapes, for an overall furlough escape rate of 0.9%.

When a comparison is made of escape rates on a yearly basis, the results are as follows: for 1973, the escape rate was 1.9%; for 1974, 1.5%; for 1975, 1.0%; for 1976 and 1977, 0.5%; for 1978, 0.4%; and for 1979, 0.5%.

Escape Rate by Individuals Furloughed Since Inception of the Program

Of the 10,951 individuals furloughed, 515 have been declared escaped at least once. The escape rate by individual furloughed, then is 4.7%.

Escape Rate by Individuals Furloughed in 1979

Of the 1,232 individuals furloughed in 1979, 38 have been declared on escape status. The escape rate by individual furloughed is 3.0%. There were 164 cases which were classified as technical escapes. These 164 cases involved 128 individuals. These individuals all voluntarily returned within two hours of their return time. Thirty-six individuals had been placed on escaped status and voluntarily returned within the two hour period more than once during 1979.

Escapees at Large

As of December 31, 1979, 467 or 91% of the total escapees had voluntarily returned or had been returned to the custody of the Department of Correction. The remaining 48, or 9% remained at large.

Trends in the Number of Individuals Furloughed

Since the inception of the furlough program, the number of individuals furloughed per year has decreased significantly. From 1973 to 1979, the number of residents furloughed decreased from 1868 to 1232 - a decline of 34%.

The escape rate by individuals furloughed has also decreased within the same time span. In 1973, the escape rate by individual was 7.2%, and 1979, 3.1%.

Effect of Furlough Program on Recidivism

Departmental research on recidivism for the years 1973 through 1977 indicates that individuals who had experienced one or more furloughs prior to release had significantly lower rates of recidivism than those individuals released without having a furlough.

For example, in 1973, the recidivism rate for residents released without a furlough was 25%, while the recidivism rate for individuals having received a furlough was 17%. Similarly, in 1977 those individuals without a furlough had a recidivism rate of 23% whereas those with a furlough had a recidivism rate of only 9%.

SECTION II
OVERVIEW

SECTION I:OVERVIEW

The furlough program for residents of Massachusetts Correctional facilities has been operating since November 6, 1972. Between that time and December 31, 1979, a total of 58,665 furloughs have been granted. In 515 cases, individuals have failed to return to their respective correctional facility within two hours of their prescribed time of return. Thus, since the inception of the program there is an overall escape rate of 0.9%.¹

Table I is a summary of furlough statistics for the years 1972 to 1979. For each of these years, information regarding the number of furloughs, the number of individuals furloughed, the number of escapes and corresponding escape rates is presented. The escape rates by furlough have decreased from 1973 to 1979 and range from 1.9% to 0.4%. Similarly, the escape rates by individuals have also decreased. There was an 11% of decrease in the number of furloughs in 1979 as compared to 1978.

There were 164 cases during the year 1979 that were classified as technical escapes. These 164 cases involved 128 individuals. Each of these 128 individuals voluntarily returned within two hours of their return time. Of the 128, 36 had been placed on this technical escape status more than once and had voluntarily returned to custody within the two hour period.

TABLE I
SUMMARY FURLough STATISTICS FOR THE YEARS 1972 TO 1979

<u>YEAR</u>	<u>NUMBER OF FURLoughS²</u>	<u>INDIVIDUALS FURLoughED</u>	<u>NUMBER OF ESCAPES</u>	<u>ESCAPE RATE BY INDIVIDUAL²</u>	<u>ESCAPE RATE BY FURLough</u>
1972 ³	1182	793	8	1.0	0.7

1979	8040	1232	38	3.1	0.5
TOTAL	58665	10951	515	4.7	0.9

Table II and III gives furlough statistics by institution furloughed from for the years 1973-1975 and 1976-1979 respectively. The number of furloughs and the corresponding escape rates for each correctional institution is given. Although minor fluctuations have occurred at some institutions, the overall escape rates have been decreasing. There were not any escapes on furlough during 1979 from Walpole, Concord, Norfolk, Charlotte House, Brooke House, Norfolk Pre-Release, 699 House, Drug Contract Houses, South Middlesex, Park Drive Pre-Release, Western Avenue Pre-Release, or Gardner.

Finally, the number of inmates furloughed per month in proportion to the average populations for each institution is presented in Table IV. Statewide, out of an average population of 2763, an average of 428 individuals receive a furlough during a course of a month. Thus results in an average proportion of 15.5% of the population being furloughed during the course of one month. This is 1.3 percentage points lower than that of last year.

* These figures represent averages for months in which the facilities were in operation.

**The greater number of individuals furloughed at these institutions reflects a substantial population turnover at these facilities.

SECTION III

ESCAPE RATES OF BACKGROUND CHARACTERISTICS OF THE FURLough PROGRAM 1979

Section III: Escape Rates by Background Characteristics of the Furlough Population

The tables which follow contain frequencies and escape rates of characteristics of individuals for each furlough granted during 1979. Information concerning an individual's present offense variables: Personal background characteristics, criminal history and furlough variables are presented. It is important to note that the figures in these tables refer to the number of furloughs, not the number of individuals furloughed; therefore, some individuals may be counted more than once if she/he has had more than one furlough during 1979.

In order to determine any significant relationships between the characteristics of the existing variables and their escape ratios, chi square statistics were computed. Significant relationships were found in the following variables: institution of commitment, known drug use, total number of court appearances, number of prior person offenses and property offenses, number of prior drug and escape offenses, number of prior juvenile incarcerations, any prior incarcerations, and age at first arrest.

Framingham commitments have a significantly higher escape rate (1.1%) than commitments to other institutions (0.4%) ($\chi^2=4.63, df=1, p<.05$). Those individuals who have some kind of drug use mentioned have a significantly higher escape rate (0.7%) than those who do not have any drug use mentioned (0.3%) ($\chi^2=4.99, df=1, p<.05$). Individuals with 12 or more prior court appearances have a rate of 0.9% compared to a rate of 0.3% for those with 11 or fewer appearances ($\chi^2=4.97, df=1, p<.05$). Individuals with 4 or more person offenses

have a significantly higher rate (0.7%) than those with 3 or fewer person offenses (0.3%) ($\chi^2=8.51$, df=1, $p < .05$), those with 6 or more property offenses (0.7%) have a higher rate than those with 5 or fewer prior property offenses (0.3%) ($\chi^2=5.19$, df=1, $p < .05$). Individuals without any prior drug offenses ($\chi^2=3.99$, df=1, $p < .05$), without any prior escape offenses ($\chi^2=9.40$, df=1, $p < .05$) without any prior juvenile incarcerations ($\chi^2=11.99$, df=1, $p < .05$), and with two or more prior incarcerations ($\chi^2=9.05$, df=1, $p < .05$) have a higher escape rate. Also, those individuals who were age 15 or younger at their age at first arrest had a higher rate (0.7%) than those whose age at first arrest was 16 or older (0.4%) ($\chi^2=5.36$, df=1, $p < .05$).

NECC	646	8	0.6
Pre-Release	4753	59	0.4
TOTAL	8040	100	0.5

FOOTNOTES

1. The Department of Correction furlough statistics define an "escape from furlough" in accordance with Department Order 46701, entitled, "Furloughs - rules and regulations". According to Section 10.4 (c): "Failure of the resident to return to the correctional facility after the two hour period set forth in Section 10.4(b) shall be considered an escape regardless of prior notification to the facility by the resident that he would be late. The superintendent or his designee shall notify, forthwith, appropriate law enforcement officials of the escape."
2. These figures may differ from prior departmental reports due to multiple counting of individuals furloughed from different institutions.
3. The figures for 1972 represent totals for only two months of 1972. Therefore, the number of furloughs and individuals furloughed is much lower than subsequent years.
